B.E.Computer Science and Engineering
Technical Symposium Event

**THEME : NextGen Campus 2026 (Engineering the Future of Student Experience)**

## PROBLEM STATMENTS

**1. AI-Based Mental Wellness Companion**

Problem Statement:

In today's fast-paced academic environment, students often experience stress, anxiety, and emotional challenges without accessible support systems. There is a need for a smart digital solution that can help monitor emotional well-being, provide timely guidance, and ensure support during critical situations while maintaining user privacy and ethical standards.

**2. Smart Campus Navigation & Facility App**

Problem Statement:

Large educational campuses often create difficulty in locating classrooms, laboratories, faculty offices, and ongoing events. Students and visitors require an efficient digital system that enhances campus accessibility, provides real-time updates, and improves overall navigation experience.

**3. AI-Powered Smart Attendance & Engagement Analyzer**

Problem Statement:

Traditional attendance systems lack efficiency and fail to provide insights into student engagement and academic participation. Institutions require a smarter system that not only tracks attendance but also provides meaningful academic performance indicators.

**4. Smart Career Guidance & Skill Gap Analyzer**

Problem Statement:

Students frequently face uncertainty in choosing suitable career paths due to lack of personalized guidance and awareness about industry-required skills. There is a need for a platform that helps analyze individual strengths and identifies skill gaps to better prepare students for future opportunities.

**5. AI-Based Expense Tracker**

Problem Statement:

Managing personal finances is a common challenge among students, often leading to overspending and poor budgeting habits. A smart financial management solution is required to help track expenses, analyze spending patterns, and encourage responsible financial behavior.

**6. Digital ID & Document Vault App**

Problem Statement:

Students regularly handle multiple academic and personal documents, which are prone to misplacement, damage, or unavailability when urgently required. A secure and organized digital system is needed to store, manage, and retrieve important documents efficiently.

**7. Smart Timetable & Schedule Organizer App**

Problem Statement:

Students often struggle to manage academic schedules, personal commitments, and sudden timetable changes, leading to missed classes and poor time management. An efficient scheduling solution is required to streamline daily planning and improve productivity.

**"Smart Solutions. Smarter Systems."**
